Fundamentals

In today's digital age, having basic computer skills is more important than ever before. Whether you're looking for a job, communicating with friends and family, or simply want to stay organized, having a good understanding of computers can make a significant difference in your life.
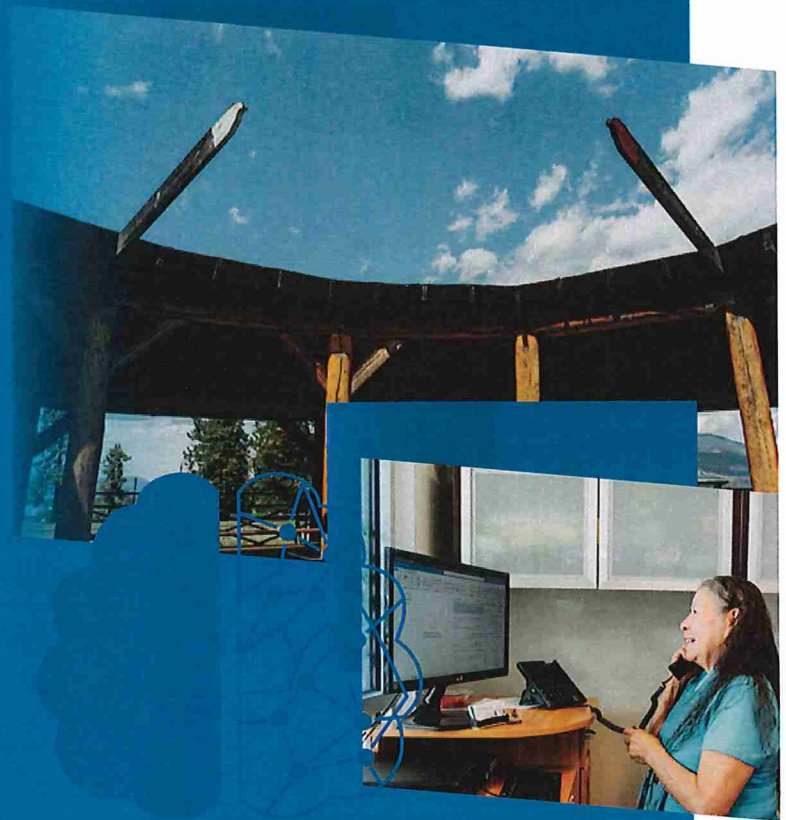

Introduction to Computers in Today's World is an introductory-level training program designed for Indigenous learners who want to deepen their knowledge of computers in the modern world.

Who it's for

This course is for Indigenous Peoples living in BC, 18+, who have limited basic computer skills and reliable access to the internet. Specifically, this course would be a benefit to individuals who want to learn how to operate and maintain a laptop, and how to set up and adjust computer software to work effectively and securely in today's work environments.

Laddering Opportunities

This course prepares you for a host of other Technology Council programs at the Foundations, Focus, and Futures program levels. Participants in this program will develop the mindset and skills needed to understand digital technology, and confidence in how to put it into action.

Learning Outcomes

- Basic computer operation and function
- Computer and application setup
- Cloud-based systems
- Word processing, spreadsheet presentation, and workplace software applications
- Computer maintenance and health

May 29 - June 23, 2023
